

Your turbine idea, transformed into a reliable solution.

WINDnovation Turbines is the expert for the development of small and medium sized wind turbines — and in particular for market entrants.

For companies that are about to build their very first turbine, we are the starting point. From the first idea to commissioning of the turbine, WINDnovation Turbines guides its customers through all project stages.

We believe that no specific turbine configuration is far superior to others at all points in all situations. When working out a turbine concept, we consider our customer's preferences and capabilities as well as the intended markets and operational conditions.

Careful engineering, state-of-the art design tools, comprehensive expert knowledge and continuous cooperation with our customers are the ingredients that lead to an appropriate and reliable turbine design, producing energy at highest cost efficiency.

You are planning on building a turbine?
